

## Exercise and common interview question

Assume you have a string **"this is a test string"**.

You need to write a code to reverse the string.

The output should be **"string test a is this"**.

Implement the knowledge you are learned in previous lectures.

This challenge will utilize knowledge of strings, if conditions, and for loops and some built-in functions also.

**Try to do some checks for the input string to make sure it is a valid string.**

Sorry for the confusion, there is no built-in reverse method for strings in Java.

There is one with String Builder, which does not give the output we want
