Exercise and common interview question

Assume you have a string "**It is a test string**".

You need to write a code to reverse the characters of the string.

Reverse String Output -> **"string test a is It"**

Reverse Characters Output -> **"gnirts tset a si tI"**

Implement the knowledge you are learned in previous lectures.

This challenge will utilize knowledge of strings, if conditions, and for loops and some built-in functions also.

Try to do some checks for the input string to make sure it is a valid string.

Optional: Try to see if you can use Scanner Class from Java to take the input from user instead of providing it from the main method.
